General Description

885014 is a high-performance, high-power Bulk Acoustic Wave (BAW) filter with extremely steep skirts and a 25 MHz pass band.

885014 is specifically designed to enable coexistence of SDARS and WCS signals within the same device or in close proximity to one another. The part passes the entire SDARS band, covering 2320-2345 MHz.

The 885014 uses advanced and inexpensive packaging techniques to achieve an industry-leading 1.7 x 1.3 x .46 mm package. The filter exhibits excellent power handling capabilities.

Notes:
1. All specifications are based on the TriQuint schematic for reference design shown on page 3.
2. Typical values are based on average measurements at +25 °C.
3. In production, devices will be tested at room temperature to a guard-banded specification; this limit is based on average performance over temperature.
4. Attenuation is defined from the insertion loss level measured at the center frequency Fc.
5. This is the optimum impedance in order to achieve the performance shown.
6. Extended temperature de-rated specification as noted.
